In-Class/Lab - Java Modularity Worksheet   Name_____

Complete the Java code as indicated below.

```java
// import the Scanner API here...

public class ModularityWorksheet
   {
     public static void main(String[] args)
      {
          //  Create a Scanner object for keyboard input
          //    and any 'work' variables you'll need...

          //  Call a method to prompt for keyboard input.  Parms passed are the
          //  prompt phrase and the Scanner. Return value is the keyboard input.

          //  Call another method to print the value

      }  //  End main

      //  Your method to get keyboard input goes here.

      //  Your method to print the keyboard input goes here.

   }  //  End class ModulatiryWorksheet
```
